Section I. INTRODUCTION

1. Scope.

This manual lists repair parts; special tools; test, measurement, and diagnostic equipment (TMDE); and other support equipment required for operation and performance of Aviation Unit Maintenance (AVUM), Aviation Intermediate Maintenance (AVIM), and depot maintenance of the ENGINE, AIRCRAFT, TURBOSHAFT, T63-A-720.

2. General.

This Repair Parts and Special Tools List is divided into the following sections:

a. *Section II. Repair Parts List.* A list of repair parts authorized for use in the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. This section is arranged by functional group, with the parts in each group listed in figure and item number sequence. Items are indented when required to indicate the relationship to the next higher assembly. The illustrations in this section will appear immediately preceding each figure of text. Items which are not assigned SMR codes appear for informational purposes only and are not to be requisitioned.

b. *Section III. Special Tools List.* A list of special tools, TMDE, and support equipment authorized for the performance of maintenance. This section, which is arranged in figure and item number sequence, contains Engine Tools (figure numbers are prefixed E). The illustrations will appear immediately following the text portion.

c. *Section IV. National Stock Number and Part Number Index.* A list, in ascending National Item Identification Number (NIIN) sequence, of all National stock numbers appearing in the listings, followed by a list, in alphabetic sequence, of all part numbers appearing in the listings. National stock number and part numbers are cross-referenced to each illustration figure and item number appearance.

3. Explanation of Columns.

The following provides an explanation of columns found in the tabular listings:

a. *Illustration.* This column is divided as follows:

(1) *Figure Number.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item Number.* The number used to identify each item called out in the illustration.

b. *Source, Maintenance, and Recoverability Codes (SMR).*

(1) *Source Code.* Source codes are assigned to support items to indicate the manner of acquiring support items for maintenance, repair, or overhaul of end items. Source codes are entered in the first and second positions of the Uniform SMR Code format as follows:

Code	Definition
PA	— — Item procured and stocked for anticipated or known usage.
PB	— — — Item procured and stocked for insurance purpose because essentiality dictates that a minimum quantity be available in the supply systems.
PC	— — — Item procured and stocked and which otherwise would be coded PA except that it is deteriorative in nature.
PD	— — — Support item, excluding support equipment, procured for initial issue or outfitting and stocked only for subsequent or additional initial issues or outfittings. Not subject to automatic replenishment.
PE	— — — Support equipment procured and stocked for initial issue or outfitting to specified maintenance repair activities.
PF	— — — Support equipment which will not be stocked but which will be centrally procured on demand.

Code		Definition
PG	---	Item procured and stocked to provide for sustained support for the life of the equipment. It is applied to an item peculiar to the equipment which, because of probable discontinuance or shut-down of production facilities, would prove uneconomical to reproduce at a later time.
KD	---	An item of a depot overhaul/repair kit and not purchased separately. Depot kit defined as a kit that provides items required at the time of overhaul or repair.
KF	---	An item of a maintenance kit and not purchased separately. Maintenance kit defined as a kit that provides an item that can be replaced at Aviation Unit Maintenance (AVUM) or Aviation Intermediate Maintenance (AVIM) levels.
KB	---	Item included in both a depot overhaul/repair kit and a maintenance kit.
MO	---	Item to be manufactured or fabricated at Aviation Unit Maintenance (AVUM) level.
MF	---	Item to be manufactured or fabricated at Aviation Intermediate Maintenance (AVIM) level.
MD	---	Item to be manufactured or fabricated at the depot maintenance level.
AO	---	Item to be assembled at Aviation Unit Maintenance (AVUM) level.
AF	---	Item to be assembled at Aviation Intermediate Maintenance (AVIM) level.
AD	---	Item to be assembled at depot maintenance level.
XA	---	Item is not procured or stocked because the requirements for the item will result in the replacement of the next higher assembly.

Code		Definition
XB	---	Item is not procured or stocked. If not available through salvage, requisition.
XC	---	Installation drawing, diagram, instruction sheet, field service drawing that is identified by manufacturer's part number.
XD	---	A support item that is not stocked. When required, item will be procured through normal supply channels.

NOTE

Cannibalization or salvage may be used as a source of supply for any items source coded above except those coded XA, and aircraft support items as restricted by AR 700-42.

(2) *Maintenance Code.* Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the Uniform SMR Code format as follows:

(a) The maintenance code entered in the third position will indicate the lowest maintenance level authorized to remove, replace, and use the support item. The maintenance code entered in the third position will indicate one of the following levels of maintenance:

Code		Application/Explanation
O	---	Support item is removed, replaced, used at the Aviation Unit Maintenance (AVUM) level.
F	---	Support item is removed, replaced, used at the Aviation Intermediate Maintenance (AVIM) level.
D	---	Support items that are removed, replaced, used at depot, mobile depot, specialized repair activity only.

(b) The maintenance code entered in the fourth position indicates whether the item is to be repaired and identifies the lowest maintenance level.

nance level with the capability to perform complete repair (i.e., all authorized maintenance functions). This position will contain one of the following maintenance codes:

Code	Application/Explanation
O	— The lowest maintenance level capable of complete repair of the support item is the Aviation Unit Maintenance (AVUM) level.
F	— The lowest maintenance level capable of complete repair of the support item is the Aviation Intermediate Maintenance (AVIM) level.
D	— The lowest maintenance level capable of complete repair of the support item is the depot level, performed by depot, mobile depot or specialized repair activity.
L	— Repair restricted to designated specialized repair activity.
Z	— Nonreparable. No repair is authorized.
B	— No repair is authorized. The item may be reconditioned by adjusting, lubricating, etc., at the user level. No parts or special tools are procured for the maintenance of this item.

(3) *Recoverability Code.* Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the Uniform SMR Code format as follows:

Code	Definition
Z	— Nonreparable item. When unserviceable, condemn and dispose at the level indicated in position 3.
O	— Reparable item. When uneconomically reparable, condemn and dispose at Aviation Unit Maintenance (AVUM) level.

Code	Definition
F	— Reparable item. When uneconomically reparable, condemn and dispose at Aviation Intermediate Maintenance (AVIM) level.
D	— Reparable item. When beyond lower level repair capability, return to depot. Condemnation and disposal not authorized below depot level.
L	— Reparable item. Repair, condemnation, and disposal not authorized below depot/specialized repair activity level.
A	— Item requires special handling or condemnation procedures because of specific reasons (i.e., precious metal content, high dollar value, critical material or hazardous material). Refer to appropriate manuals/directives for specific instructions.

c. *National Stock Number.* Indicates the National stock number assigned to the item and will be used for requisitioning purposes.

d. *Part Number.* Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements, to identify an item or range of items.

NOTE

When a stock numbered item is requisitioned, the repair part received may have a different part number than the part being replaced.

e. *Federal Supply Code for Manufacturer (FSCM).* The FSCM is a 5-digit numeric code listed in SB 708-42 which is used to identify the manufacturer, distributor, or Government agency, etc.

f. *Description.* Indicates the Federal item name and any additional description required to identify the item. This column will also contain the Basis of Issue (BOI) for Special Tools.

g. Unit of Measure (U/M). Indicates the standard of the basic quantity of the listed item as used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation (e.g., ea, in, pr, etc.). When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required units of measure will be requisitioned.

h. Quantity Incorporated in Unit. Indicates the quantity of the item required for one assembly only, including instances when similar assemblies are broken down together. A “V” appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, (e.g., shims, spacers, etc.). When parts are shown as attaching two or more items, the quantity of these parts are those necessary to attach only one of the items.

4. Special Information.

a. The following publications pertain to the ENGINE MODEL T63-A-720 and its components:

Publication and Short Title

■ TB 55-1500-307-24	Aircraft Components Requiring Maintenance Management and Historical Data
TM 55-2840-241-23	Aviation Unit and Aviation Intermediate Maintenance Engine Model T63-A-720
TM 55-1500-204-25/1	General Aircraft Maintenance Manual
DMWR 55-2840-242	Depot Maintenance Engine Model T63-A-720

b. Oversize and undersize parts, such as studs, bushings, etc., are listed immediately after the standard size part and in the same indent. The degree of oversize or undersize is stated in the description. These parts will not have a required quantity shown.

c. When an item has been replaced, issue will continue to be made until existing stocks become exhausted except in the case when replacement is limited to one-way use. To insure complete exhaustion of stock on hand and if it is acceptable to use a replaced item, the replaced item should be requisitioned. To denote one- or two-way replacement, mnemonic codes will be used in the description as follows The replaced item(s) will always contain the mnemonic code RPL-BY. The replacing item, if

it is a two-way replacement, will contain the mnemonic code RPLS. If it is a one-way replacement, no code will be used. Additional mnemonic codes (para6), are used to reflect the status and relationship of items similar or related items used in the end article (e.g., OBS-BY, ASSYFR, OBS-AFT-CMPL-W).

d. When details of an assembly are shown on another text page, the description of that assembly is followed by a notation stating where these details can be located. “Example: 6876838, Turbine Assembly, Gas Producer. See figure 20 for Breakdown.” The parts that make up the Turbine Assembly, Gas Producer will be found on the test listing for figure 20.

e. Directional references left and right are determined by standing at the rear of the aircraft or engine and looking forward.

5. How to Locate Repair Parts.

a. When National Stock Number of Part Number Is Unknown:

(1) First. Using the table of contents, determine the assembly group within which the repair part belongs. This is necessary since illustrations are prepared for assembly groups, and listings are divided into the same groups.

(2) Second. Find the illustration covering the assembly group to which the repair part belongs.

(3) Third. Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) Fourth. Using the Repair Parts Listing, find the figure and item number noted on the illustration.

b. When National Stock Number or Part Number is Known:

(1) First. Using the Index of National Stock Numbers and Part Numbers, find the pertinent National Stock Number or part number. This index is in ascending National Item Identification Number (NIIN) sequence followed by a list of part numbers in ascending alphameric sequence, cross-referenced to the illustration figure number and item number.

(2) Second. After finding the figure and item number, locate the figure and item number in the repair parts list.

~~SAMPLE~~

I ordered a gasket, item 19 on
figure B-16 by NSN 2910-00-762-3001.
I got a gasket but it doesn't fit.
Supply says I got what I
ordered, so the NSN is wrong.
Please give me a good NSN.
